<b>Name</b>	ASPSCR1
<b>Synonyms</b>	ASPL, RCC17, TUG, UBXD9, UBXN9

<b>Function</b>	Tethering protein that sequesters GLUT4-containing vesicles in the cytoplasm in the absence of insulin. Modulates the amount of GLUT4 that is available at the cell surface (By similarity). Enhances VCP methylation catalyzed by VCPKMT.
<b>Cellular Location</b>	Endomembrane system; Peripheral membrane protein. Endoplasmic reticulum-Golgi intermediate compartment membrane; Peripheral membrane protein. Cytoplasm Nucleus
<b>Tissue Location</b>	Ubiquitous. Highly expressed in testis, heart, skeletal muscle and pancreas.

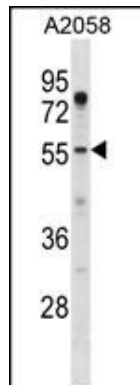

## Background

This gene is a candidate gene for alveolar soft part sarcoma (ASPS). It has been found that this gene is fused with transcription factor TFE3 gene in ASPS and also in renal cell carcinomas. Several alternatively spliced transcript variants of this gene have been described, but their full length nature has not been determined.
