

NUP50 Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP16725c

Product Information

Application WB, E **Primary Accession** Q9UKX7 Other Accession NP 009103.2 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB36252 **Calculated MW** 50144 224-252 **Antigen Region**

Additional Information

Gene ID 10762

Other Names Nuclear pore complex protein Nup50, 50 kDa nucleoporin, Nuclear

pore-associated protein 60 kDa-like, Nucleoporin Nup50, NUP50, NPAP60L

Target/SpecificityThis NUP50 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 224-252 amino acids from the Central

region of human NUP50.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions NUP50 Antibody (Center) is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name NUP50

Synonyms NPAP60L

Function Component of the nuclear pore complex that has a direct role in nuclear

protein import (PubMed: 20016008). Actively displaces NLSs from importin-alpha, and facilitates disassembly of the importin- alpha: beta-cargo complex and importin recycling (PubMed: 20016008). Interacts with regulatory proteins of cell cycle progression including CDKN1B (By similarity). This interaction is required for correct intracellular transport and degradation of CDKN1B (By similarity).

Cellular Location

Nucleus, nuclear pore complex. Nucleus membrane {ECO:0000250 | UniProtKB:O08587}; Peripheral membrane protein {ECO:0000250 | UniProtKB:O08587}; Nucleoplasmic side {ECO:0000250 | UniProtKB:O08587}. Note=Localizes to the nucleoplasmic fibrils of the nuclear pore complex (By similarity). Dissociates from the NPC structure early during prophase of mitosis (PubMed:12802065) Associates with the newly formed nuclear membrane during telophase (PubMed:12802065). In the testis, the localization changes during germ cell differentiation from the nuclear surface in spermatocytes to the whole nucleus (interior) in spermatids and back to the nuclear surface in spermatozoa (By similarity). {ECO:0000250 | UniProtKB:O08587, ECO:0000269 | PubMed:12802065}

Tissue Location

Ubiquitous. Highest levels in testis, peripheral blood leukocytes and fetal liver

Background

The nuclear pore complex is a massive structure that extends across the nuclear envelope, forming a gateway that regulates the flow of macromolecules between the nucleus and the cytoplasm. Nucleoporins are the main components of the nuclear pore complex in eukaryotic cells. The protein encoded by this gene is a member of the FG-repeat containing nucleoporins that functions as a soluble cofactor in importin-alpha:beta-mediated nuclear protein import. Pseudogenes of this gene are found on chromosomes 5, 6, and 14. Two transcript variants encoding different isoforms have been found for this gene.
