

# RHD Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab)

Catalog # AP17214c

## Product Information

---

<b>Application</b>	WB, E
<b>Primary Accession</b>	<a href="#">Q02161</a>
<b>Other Accession</b>	<a href="#">NP_001121163.1</a> , <a href="#">NP_057208.2</a>
<b>Reactivity</b>	Human
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Isotype</b>	Rabbit IgG
<b>Clone Names</b>	RB36830
<b>Calculated MW</b>	45211
<b>Antigen Region</b>	173-201

## Additional Information

---

<b>Gene ID</b>	6007
<b>Other Names</b>	Blood group Rh(D) polypeptide, RHXIII, Rh polypeptide 2, RhPII, Rhesus D antigen, CD240D, RHD
<b>Target/Specificity</b>	This RHD antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 173-201 amino acids from the Central region of human RHD.
<b>Dilution</b>	WB~~1:1000 E~~Use at an assay dependent concentration.
<b>Format</b>	Purified polyclonal antibody supplied in PBS with 0.05% (V/V) Proclin 300. This antibody is purified through a protein A column, followed by peptide affinity purification.
<b>Storage</b>	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
<b>Precautions</b>	RHD Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

## Protein Information

---

<b>Name</b>	RHD
<b>Function</b>	May be part of an oligomeric complex which is likely to have a transport or channel function in the erythrocyte membrane.

**Cellular Location**

Cell membrane; Multi-pass membrane protein

**Tissue Location**

Restricted to tissues or cell lines expressing erythroid characters

## Background

---

The Rh blood group system is the second most clinically significant of the blood groups, second only to ABO. It is also the most polymorphic of the blood groups, with variations due to deletions, gene conversions, and missense mutations. The Rh blood group includes this gene, which encodes the RhD protein, and a second gene that encodes both the RhC and RhE antigens on a single polypeptide. The two genes, and a third unrelated gene, are found in a cluster on chromosome 1. The classification of Rh-positive and Rh-negative individuals is determined by the presence or absence of the highly immunogenic RhD protein on the surface of erythrocytes. Multiple transcript variants encoding different isoforms have been found for this gene.
