

MARCH9 Antibody (C-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP17367b

Product Information

Application WB, E Primary Accession Q86YJ5

Other Accession Q3TZ87, NP 612405.2

Reactivity Human **Predicted** Mouse Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB37811 **Calculated MW** 37772 304-330 **Antigen Region**

Additional Information

Gene ID 92979

Other Names E3 ubiquitin-protein ligase MARCH9, 632-, Membrane-associated RING finger

protein 9, Membrane-associated RING-CH protein IX, MARCH-IX, RING finger

protein 179, MARCH9, RNF179

Target/Specificity This MARCH9 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 304-330 amino acids from the

C-terminal region of human MARCH9.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions MARCH9 Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name MARCHF9 (HGNC:25139)

Synonyms MARCH9, RNF179

Function E3 ubiquitin-protein ligase that may mediate ubiquitination of MHC-I, CD4

and ICAM1, and promote their subsequent endocytosis and sorting to lysosomes via multivesicular bodies. E3 ubiquitin ligases accept ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then

directly transfer the ubiquitin to targeted substrates.

Cellular Location Golgi apparatus membrane; Multi-pass membrane protein. Lysosome

membrane; Multi- pass membrane protein

Tissue Location Ubiquitously expressed.

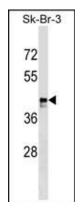

Background

MARCH9 is a member of the MARCH family of membrane-bound E3 ubiquitin ligases (EC 6.3.2.19). MARCH enzymes add ubiquitin (see MIM 191339) to target lysines in substrate proteins, thereby signaling their vesicular transport between membrane compartments. MARCH9 induces internalization of several membrane glycoproteins and directs them to the endosomal compartment (Bartee et al., 2004 [PubMed 14722266]; Hoer et al., 2007 [PubMed 17174307]).[supplied by OMIM].
