

# HAUS8 Antibody (N-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP18272a

## **Product Information**

**Application** WB, E **Primary Accession 09BT25 Other Accession** NP 219485.1 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB38267 **Calculated MW** 44857 28-54 **Antigen Region** 

## **Additional Information**

**Gene ID** 93323

Other Names HAUS augmin-like complex subunit 8, HEC1/NDC80-interacting

centrosome-associated protein 1, Sarcoma antigen NY-SAR-48, HAUS8, HICE1

**Target/Specificity**This HAUS8 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 28-54 amino acids from the N-terminal

region of human HAUS8.

**Dilution** WB~~1:1000 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** HAUS8 Antibody (N-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

### **Protein Information**

Name HAUS8

Synonyms HICE1

**Function** Contributes to mitotic spindle assembly, maintenance of centrosome

integrity and completion of cytokinesis as part of the HAUS augmin-like complex.

#### **Cellular Location**

Cytoplasm. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Cytoplasm, cytoskeleton, spindle. Cytoplasm, cytoskeleton, spindle pole. Note=During interphase, primarily cytoplasmic and associates with centrosomes and with the mitotic spindles, preferentially at the spindle pole vicinity. During anaphase and telophase, additionally associates with the spindle midzone and midbody, respectively. Localizes to mitotic spindle microtubules

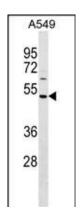

# **Background**

HAUS8 is 1 of 8 subunits of the 390-kD human augmin complex, or HAUS complex. The augmin complex was first identified in Drosophila, and its name comes from the Latin verb 'augmentare,' meaning 'to increase.' The augmin complex is a microtubule-binding complex involved in microtubule generation within the mitotic spindle and is vital to mitotic spindle assembly (Goshima et al., 2008 [PubMed 18443220]; Uehara et al., 2009 [PubMed 19369198]).
