

PI3KC3 Antibody (S851)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP1851j

Product Information

Application WB, IHC-P, E Primary Accession Q8NEB9

Other Accession <u>Q6AZN6</u>, <u>Q88763</u>, <u>Q5D891</u>, <u>Q6PF93</u>

Reactivity Human

Predicted Mouse, Pig, Rat, Xenopus

HostRabbitClonalityPolyclonalIsotypeRabbit IgGClone NamesRB11907Calculated MW101549Antigen Region831-856

Additional Information

Gene ID 5289

Other Names Phosphatidylinositol 3-kinase catalytic subunit type 3, PI3-kinase type 3, PI3K

type 3, PtdIns-3-kinase type 3, Phosphatidylinositol 3-kinase p100 subunit,

Phosphoinositide-3-kinase class 3, hVps34, PIK3C3, VPS34

Target/Specificity This PI3KC3 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 831-856 amino acids from human

PI3KC3.

Dilution WB~~1:1000 IHC-P~~1:100~500 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions PI3KC3 Antibody (S851) is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name PIK3C3 (<u>HGNC:8974</u>)

Synonyms VPS34 {ECO:0000305}

Function

Catalytic subunit of the PI3K complex that mediates formation of phosphatidylinositol 3-phosphate; different complex forms are believed to play a role in multiple membrane trafficking pathways: PI3KC3-C1 is involved in initiation of autophagosomes and PI3KC3-C2 in maturation of autophagosomes and endocytosis (PubMed:14617358, PubMed:33637724, PubMed:7628435). As part of PI3KC3-C1, promotes endoplasmic reticulum membrane curvature formation prior to vesicle budding (PubMed:32690950). Involved in regulation of degradative endocytic trafficking and required for the abscission step in cytokinesis, probably in the context of PI3KC3-C2 (PubMed:20208530, PubMed:20643123). Involved in the transport of lysosomal enzyme precursors to lysosomes (By similarity). Required for transport from early to late endosomes (By similarity).

Cellular Location

Midbody. Late endosome. Cytoplasmic vesicle, autophagosome. Note=As component of the PI3K complex I localized to pre-autophagosome structures. As component of the PI3K complex II localized predominantly to endosomes (PubMed:14617358). Also localizes to discrete punctae along the ciliary axoneme and to the base of the ciliary axoneme (By similarity) {ECO:0000250|UniProtKB:Q6PF93, ECO:0000305|PubMed:14617358}

Tissue Location

Ubiquitously expressed, with a highest expression in skeletal muscle.

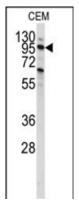

Background

PI3KC3 is a catalytic subunit of the PI3K complex involved in the transport of lysosomal enzyme precursors to lysosomes. This enzyme acts catalytically to convert 1-phosphatidyl-1D-myo-inositol to 1-phosphatidyl-1D-myo-inositol 3-phosphate. Macroautophagy is the major inducible pathway for the general turnover of cytoplasmic constituents in eukaryotic cells, it is also responsible for the degradation of active cytoplasmic enzymes and organelles during nutrient starvation. Macroautophagy involves the formation of double-membrane bound autophagosomes which enclose the cytoplasmic constituent targeted for degradation in a membrane bound structure, which then fuse with the lysosome (or vacuole) releasing a single-membrane bound autophagic bodies which are then degraded within the lysosome (or vacuole). The regulation of the Beclin 1-PI3KC3 complex lipid kinase activity is a critical element in the autophagy signaling pathway.

Images

Western blot analysis of anti-PI3KC3 Antibody (S851) (Cat.#AP1851j) in CEM cell line lysates (35ug/lane). PI3KC3 (arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human skeletal

muscle tissue reacted with PI3KC3 Antibody (S851), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
