Protein Information

Name	TFDP3
Synonyms	DP4, HCA661
Function	Competitive inhibitor of E2F-mediated transactivation activity. Impairs E2F-mediated cell-cycle progression from G(1) to S phase.

Cellular Location	Nucleus. Cytoplasm. Note=Translocates to the nucleus on heterodimerization with E2F family members
Tissue Location	Predominantly expressed in testis. Low level of expression in pancreas. Highly expressed in ovarian and colon cancer cell lines.

Background

This gene encodes a member of the DP family of transcription factors. These factors heterodimerize with E2F proteins to enhance their DNA-binding activity and promote transcription from E2F target genes. This protein functions as a negative regulator and inhibits the DNA binding and transcriptional activities of E2F factors.
