

DHH Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP19172c

Product Information

Application WB, E Primary Accession 043323

Other Accession <u>Q61488</u>, <u>NP_066382.1</u>

Reactivity Human **Predicted** Mouse Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB39505 **Calculated MW** 43577 **Antigen Region** 195-223

Additional Information

Gene ID 50846

Other Names Desert hedgehog protein, DHH, HHG-3, Desert hedgehog protein N-product,

Desert hedgehog protein C-product, DHH

Target/Specificity This DHH antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 195-223 amino acids from the Central

region of human DHH.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions DHH Antibody (Center) is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name DHH (HGNC:2865)

Function [Desert hedgehog protein]: The C-terminal part of the desert hedgehog

protein precursor displays an autoproteolysis and a cholesterol transferase

activity (By similarity). Both activities result in the cleavage of the full-length protein into two parts (N- product and C-product) followed by the covalent attachment of a cholesterol moiety to the C-terminal of the newly generated N-product (By similarity). Both activities occur in the endoplasmic reticulum (By similarity). Functions in cell-cell mediated juxtacrine signaling (PubMed:24342078). Promotes endothelium integrity (PubMed:33063110). Binds to PTCH1 receptor, which functions in association with smoothened (SMO), to activate the transcription of target genes in endothelial cells (PubMed:33063110). In Schwann cells, controls the development of the peripheral nerve sheath and the transition of mesenchymal cells to form the epithelium-like structure of the perineurial tube (By similarity).

Cellular Location

[Desert hedgehog protein N-product]: Cell membrane {ECO:0000250|UniProtKB:Q62226}; Lipid-anchor {ECO:0000250|UniProtKB:Q62226}

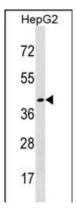

Background

This gene encodes a member of the hedgehog family. The hedgehog gene family encodes signaling molecules that play an important role in regulating morphogenesis. This protein is predicted to be made as a precursor that is autocatalytically cleaved; the N-terminal portion is soluble and contains the signalling activity while the C-terminal portion is involved in precursor processing. More importantly, the C-terminal product covalently attaches a cholesterol moiety to the N-terminal product, restricting the N-terminal product to the cell surface and preventing it from freely diffusing throughout the organism. Defects in this protein have been associated with partial gonadal dysgenesis (PGD) accompanied by minifascicular polyneuropathy. This protein may be involved in both male gonadal differentiation and perineurial development.
