

NR2E1 Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP19904c

Product Information

Application WB, E Primary Accession Q9Y466

Other Accession P70052, Q64104, Q91379, NP 003260.1

Reactivity Human

Predicted Chicken, Mouse, Xenopus

HostRabbitClonalityPolyclonalIsotypeRabbit IgGClone NamesRB41747Calculated MW42589Antigen Region75-102

Additional Information

Gene ID 7101

Other Names Nuclear receptor subfamily 2 group E member 1, Nuclear receptor TLX,

Protein tailless homolog, Tll, hTll, NR2E1, TLX

Target/Specificity This NR2E1 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 75-102 amino acids from the Central

region of human NR2E1.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions NR2E1 Antibody (Center) is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name NR2E1

Synonyms TLX

Function

Orphan receptor that binds DNA as a monomer to hormone response elements (HRE) containing an extended core motif half-site sequence 5'-AAGGTCA-3' in which the 5' flanking nucleotides participate in determining receptor specificity (By similarity). May be required to pattern anterior brain differentiation. Involved in the regulation of retinal development and essential for vision. During retinogenesis, regulates PTEN-Cyclin D expression via binding to the promoter region of PTEN and suppressing its activity (By similarity). May be involved in retinoic acid receptor (RAR) regulation in retinal cells.

Cellular Location

Nucleus {ECO:0000255 | PROSITE-ProRule:PRU00407}.

Tissue Location

Brain specific. Present in all brain sections tested, highest levels in the caudate nucleus and hippocampus, weakest levels in the thalamus.

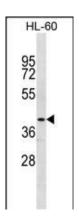

Background

Orphan receptor that binds DNA as a monomer to hormone response elements (HRE) containing an extended core motif half-site sequence 5'-AAGGTCA-3' in which the 5' flanking nucleotides participate in determining receptor specificity. May be required for brain development. May be involved in the regulation of retinal development (By similarity).
