

# BMPR1A Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP2004B

#### **Product Information**

Application WB, IHC-P, E
Primary Accession P36894
Other Accession NP 004320

**Reactivity** Human, Rat, Mouse

HostRabbitClonalityPolyclonalIsotypeRabbit IgGCalculated MW60198Antigen Region166-196

### **Additional Information**

Gene ID 657

Other Names Bone morphogenetic protein receptor type-1A, BMP type-1A receptor,

BMPR-1A, Activin receptor-like kinase 3, ALK-3, Serine/threonine-protein

kinase receptor R5, SKR5, CD292, BMPR1A, ACVRLK3, ALK3

Target/Specificity This BMPR1A antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 166-196 amino acids from the

C-terminal region of human BMPR1A.

**Dilution** WB~~1:1000 IHC-P~~1:100~500 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation

followed by dialysis against PBS.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**BMPR1A Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

#### **Protein Information**

Name BMPR1A

Synonyms ACVRLK3, ALK3

**Function** On ligand binding, forms a receptor complex consisting of two type II and

two type I transmembrane serine/threonine kinases. Type II receptors phosphorylate and activate type I receptors which autophosphorylate, then bind and activate SMAD transcriptional regulators. Receptor for BMP2, BMP4, GDF5 and GDF6. Positively regulates chondrocyte differentiation through GDF5 interaction. Mediates induction of adipogenesis by GDF6. May promote the expression of HAMP, potentially via its interaction with BMP2 (By similarity).

**Cellular Location** Cell membrane; Single-pass type I membrane protein. Cell surface

{ECO:0000250 | UniProtKB:P36895}

**Tissue Location** Highly expressed in skeletal muscle.

## **Background**

The bone morphogenetic protein (BMP) receptors are a family of transmembrane serine/threonine kinases that include the type I receptors BMPR1A and BMPR1B and the type II receptor BMPR2. These receptors are also closely related to the activin receptors, ACVR1 and ACVR2. The ligands of these receptors are members of the TGF-beta superfamily. TGF-betas and activins transduce their signals through the formation of heteromeric complexes with 2 different types of serine (threonine) kinase receptors: type I receptors of about 50-55 kD and type II receptors of about 70-80 kD. Type II receptors bind ligands in the absence of type I receptors, but they require their respective type I receptors for signaling, whereas type I receptors require their respective type II receptors for ligand binding.

## **Images**

Western blot analysis of lysates from 293, mouse NIH/3T3 cell line (from left to right), using BMPR1A Antibody (C180) (Cat. #AP2004b). AP2004b was diluted at 1:1000 at each lane. A goat anti-rabbit IgG H&L(HRP) at 1:5000 dilution was used as the secondary antibody. Lysates at 35ug per lane.

Western blot analysis of anti-BMPR1A Pab (Cat. #AP2004b) in CEM cell line lysates (35ug/lane). BMPR1A(arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.
