

PDX1 Antibody (T11)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP2034d

Product Information

Application WB, IF, IHC-P, E

Primary Accession 000330

Other Accession P52947, P52946, P52945
Reactivity Human, Rat, Mouse

Predicted Mouse, Rat
Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Clone Names RB15204
Calculated MW 54122
Antigen Region 1-30

Additional Information

Gene ID 8050

Other Names Pyruvate dehydrogenase protein X component, mitochondrial,

Dihydrolipoamide dehydrogenase-binding protein of pyruvate dehydrogenase complex, E3-binding protein, E3BP, Lipoyl-containing pyruvate dehydrogenase

complex component X, proX, PDHX, PDX1

Target/Specificity This PDX1 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 1-30 amino acids from human PDX1.

Dilution WB~~1:1000 IF~~1:100 IHC-P~~1:100~500 E~~Use at an assay dependent

concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions PDX1 Antibody (T11) is for research use only and not for use in diagnostic or

therapeutic procedures.

Protein Information

Name PDHX

Synonyms PDX1

Function Required for anchoring dihydrolipoamide dehydrogenase (E3) to the

dihydrolipoamide transacetylase (E2) core of the pyruvate dehydrogenase complexes of eukaryotes. This specific binding is essential for a functional

PDH complex.

Cellular Location Mitochondrion matrix.

Background

PDX1, located in the mitochondrial matrix, is required for anchoring dihydrolipoamide dehydrogenase (E3) to the dihydrolipoamide transacetylase (E2) core of the pyruvate dehydrogenase complexes of eukaryotes. This specific binding is essential for a functional PDH complex. Eukaryotic pyruvate dehydrogenase complexes are organized about a core consisting of the oligomeric dihydrolipoamide acetyl-transferase, around which are arranged multiple copies of pyruvate dehydrogenase, dihydrolipoamide dehydrogenase and protein X bound by noncovalent bonds. Defects in PDHX are a cause of lacticacidemia. PDX1 belongs to the 2-oxoacid dehydrogenase family and contains 1 lipoyl-binding domain.

Images

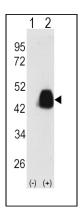

Fluorescent confocal image of SY5Y cells stained with PDX1 (T11) antibody. SY5Y cells were fixed with 4% PFA (20 min), permeabilized with Triton X-100 (0.2%, 30 min). Cells were then incubated with AP2034d PDX1 (T11) primary antibody (1:100, 2 h at room temperature). For secondary antibody, Alexa Fluor® 488 conjugated donkey anti-rabbit antibody (green) was used (1:1000, 1h). Nuclei were counterstained with Hoechst 33342 (blue) (10 µg/ml, 5 min). Note the highly specific localization of the PDX1 immunosignal to the nucleus, supported by Human Protein Atlas Data

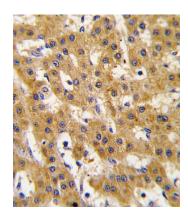

(http://www.proteinatlas.org/ENSG00000110435).

Western blot analysis of anti-PDX1 Antibody (T11) (Cat.#AP2034d) in NCI-H460 cell line lysates (35ug/lane).PDX1-T11(arrow) was detected using the purified Pab.

Western blot analysis of PDX1 (arrow) using PDX1 Antibody (T11) (Cat.#AP2034d). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected with the PDX1 gene (Lane 2) (Origene Technologies).

Formalin-fixed and paraffin-embedded human hepatocarcinoma tissue reacted with Phospho-PDX1-T11.ctrl antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
