

PSMB2 Antibody (C-term)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP20507b

Product Information

Application WB, IHC-P, E **Primary Accession** P49721

Other Accession P40307, Q9R1P3
Reactivity Human, Rat, Mouse

Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Calculated MW 22836
Antigen Region 133-163

Additional Information

Gene ID 5690

Other Names Proteasome subunit beta type-2, Macropain subunit C7-I, Multicatalytic

endopeptidase complex subunit C7-I, Proteasome component C7-I, PSMB2

Target/Specificity This PSMB2 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 133-163 amino acids from the

C-terminal region of human PSMB2.

Dilution WB~~1:1000 IHC-P~~1:100~500 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions PSMB2 Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name PSMB2 (HGNC:9539)

Function Non-catalytic component of the 20S core proteasome complex involved in

the proteolytic degradation of most intracellular proteins. This complex plays

numerous essential roles within the cell by associating with different

regulatory particles. Associated with two 19S regulatory particles, forms the

26S proteasome and thus participates in the ATP-dependent degradation of ubiquitinated proteins. The 26S proteasome plays a key role in the maintenance of protein homeostasis by removing misfolded or damaged proteins that could impair cellular functions, and by removing proteins whose functions are no longer required. Associated with the PA200 or PA28, the 20S proteasome mediates ubiquitin-independent protein degradation. This type of proteolysis is required in several pathways including spermatogenesis (20S-PA200 complex) or generation of a subset of MHC class I-presented antigenic peptides (20S-PA28 complex).

Cellular Location

Cytoplasm. Nucleus. Note=Translocated from the cytoplasm into the nucleus following interaction with AKIRIN2, which bridges the proteasome with the nuclear import receptor IPO9

Background

The proteasome is a multicatalytic proteinase complex which is characterized by its ability to cleave peptides with Arg, Phe, Tyr, Leu, and Glu adjacent to the leaving group at neutral or slightly basic pH. The proteasome has an ATP-dependent proteolytic activity. This subunit has a trypsin-like activity.
