Protein Information

Name	EIF4G2 (HGNC:3297)
Function	Appears to play a role in the switch from cap-dependent to IRES-mediated translation during mitosis, apoptosis and viral infection. Cleaved by some caspases and viral proteases.
Tissue Location	Ubiquitously expressed in all adult tissues examined, with high levels in

skeletal muscle and heart. Also expressed in fetal brain, lung, liver and kidney.

Background

Appears to play a role in the switch from cap-dependent to IRES-mediated translation during mitosis, apoptosis and viral infection. Cleaved by some caspases and viral proteases.
