

PPARG Antibody (N-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP20705a

Product Information

Application WB, E **Primary Accession** P37231

Reactivity Human, Mouse

HostRabbitClonalityPolyclonalIsotypeRabbit IgGClone NamesRB43831Calculated MW57620

Additional Information

Gene ID 5468

Other Names Peroxisome proliferator-activated receptor gamma, PPAR-gamma, Nuclear

receptor subfamily 1 group C member 3, PPARG, NR1C3

Target/Specificity This PPARG antibody is generated from a rabbit immunized with a KLH

conjugated synthetic peptide between 2-35 amino acids from the N-terminal

region of human PPARG.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.05% (V/V) Proclin 300. This

antibody is purified through a protein A column, followed by peptide affinity

purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions PPARG Antibody (N-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name PPARG

Synonyms NR1C3

Function Nuclear receptor that binds peroxisome proliferators such as hypolipidemic

drugs and fatty acids. Once activated by a ligand, the nuclear receptor binds

to DNA specific PPAR response elements (PPRE) and modulates the

transcription of its target genes, such as acyl-CoA oxidase. It therefore controls the peroxisomal beta-oxidation pathway of fatty acids. Key regulator of adipocyte differentiation and glucose homeostasis. ARF6 acts as a key regulator of the tissue-specific adipocyte P2 (aP2) enhancer. Acts as a critical regulator of gut homeostasis by suppressing NF-kappa-B-mediated pro-inflammatory responses. Plays a role in the regulation of cardiovascular circadian rhythms by regulating the transcription of BMAL1 in the blood vessels (By similarity).

Cellular Location Nucleus. Cytoplasm. Note=Redistributed from the nucleus to the cytosol

through a MAP2K1/MEK1-dependent manner. NOCT enhances its nuclear

translocation

Tissue Location Highest expression in adipose tissue. Lower in skeletal muscle, spleen, heart

and liver. Also detectable in placenta, lung and ovary.

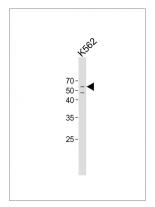

Background

Nuclear receptor that binds peroxisome proliferators such as hypolipidemic drugs and fatty acids. Once activated by a ligand, the nuclear receptor binds to DNA specific PPAR response elements (PPRE) and modulates the transcription of its target genes, such as acyl-CoA oxidase. It therefore controls the peroxisomal beta-oxidation pathway of fatty acids. Key regulator of adipocyte differentiation and glucose homeostasis. ARF6 acts as a key regulator of the tissue-specific adipocyte P2 (aP2) enhancer. Acts as a critical regulator of gut homeostasis by suppressing NF-kappa-B-mediated proinflammatory responses.
