

FOXO4 Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP21102a

Product Information

Application WB, E **Primary Accession** P98177 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB51188 Calculated MW 53684

Additional Information

Gene ID 4303

Other Names Forkhead box protein O4, Fork head domain transcription factor AFX1,

FOXO4, AFX, AFX1, MLLT7

Target/Specificity This FOXO4 antibody is generated from a rabbit immunized with a KLH

conjugated synthetic peptide between 415-450 amino acids from the

C-terminal region of human FOXO4.

Dilution WB~~1:1000 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions FOXO4 Antibody (C-term) is for research use only and not for use in diagnostic

or therapeutic procedures.

Protein Information

Name FOXO4

Synonyms AFX, AFX1, MLLT7

Function Transcription factor involved in the regulation of the insulin signaling

pathway. Binds to insulin-response elements (IREs) and can activate

transcription of IGFBP1. Down-regulates expression of HIF1A and suppresses

hypoxia-induced transcriptional activation of HIF1A-modulated genes. Also involved in negative regulation of the cell cycle. Involved in increased proteasome activity in embryonic stem cells (ESCs) by activating expression of PSMD11 in ESCs, leading to enhanced assembly of the 26S proteasome, followed by higher proteasome activity.

Tollowed by Higher proceasoffic activity

Cytoplasm. Nucleus. Note=When phosphorylated, translocated from nucleus

to cytoplasm. Dephosphorylation triggers nuclear translocation.

Monoubiquitination increases nuclear localization. When deubiquitinated,

translocated from nucleus to cytoplasm

Tissue Location Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.

Isoform zeta is most abundant in the liver, kidney, and pancreas

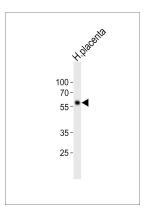

Background

Transcription factor involved in the regulation of the insulin signaling pathway. Binds to insulin-response elements (IREs) and can activate transcription of IGFBP1. Down-regulates expression of HIF1A and suppresses hypoxia-induced transcriptional activation of HIF1A-modulated genes. Also involved in negative regulation of the cell cycle. Involved in increased proteasome activity in embryonic stem cells (ESCs) by activating expression of PSMD11 in ESCs, leading to enhanced assembly of the 26S proteasome, followed by higher proteasome activity.

Images

Western blot analysis of lysate from human placenta tissue lysate, using FOXO4 Antibody (C-term)(Cat. #AP21102a). AP21102a was diluted at 1:1000. A goat anti-rabbit IgG H&L(HRP) at 1:10000 dilution was used as the secondary antibody. Lysate at 20ug.
