

# MLF1 Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP21309b

## **Product Information**

Application	WB, E
Primary Accession	<u>P58340</u>
Reactivity	Human
Host	Rabbit
Clonality	polyclonal
Isotype	Rabbit IgG
Clone Names	RB52389
Calculated MW	30627

## **Additional Information**

Gene ID	4291
Other Names	Myeloid leukemia factor 1, Myelodysplasia-myeloid leukemia factor 1, MLF1
Target/Specificity	This MLF1 antibody is generated from a rabbit immunized with a KLH conjugated synthetic peptide between 232-266 amino acids from the C-terminal region of human MLF1.
Dilution	WB~~1:2000 E~~Use at an assay dependent concentration.
Format	Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.
Storage	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	MLF1 Antibody (C-term) is for research use only and not for use in diagnostic or therapeutic procedures.

## **Protein Information**

Name	MLF1
Function	Involved in lineage commitment of primary hemopoietic progenitors by restricting erythroid formation and enhancing myeloid formation. Interferes with erythropoietin-induced erythroid terminal differentiation by preventing cells from exiting the cell cycle through suppression of CDKN1B/p27Kip1 levels. Suppresses COP1 activity via CSN3 which activates p53 and induces cell cycle arrest. Binds DNA and affects the expression of a number of genes so

	may function as a transcription factor in the nucleus.
Cellular Location	Cytoplasm {ECO:0000250 UniProtKB:Q9QWV4}. Nucleus {ECO:0000250 UniProtKB:Q9QWV4}. Cell projection, cilium {ECO:0000250 UniProtKB:Q9QWV4}. Cytoplasm, cytoskeleton, cilium basal body {ECO:0000250 UniProtKB:Q9QWV4}. Note=Shuttles between the cytoplasm and nucleus. {ECO:0000250 UniProtKB:Q9QWV4}
Tissue Location	Most abundant in testis, ovary, skeletal muscle, heart, kidney and colon. Low expression in spleen, thymus and peripheral blood leukocytes

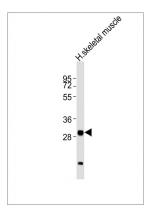

## Background

Involved in lineage commitment of primary hemopoietic progenitors by restricting erythroid formation and enhancing myeloid formation. Interferes with erythropoietin-induced erythroid terminal differentiation by preventing cells from exiting the cell cycle through suppression of CDKN1B/p27Kip1 levels. Suppresses RFWD2/COP1 activity via CSN3 which activates p53 and induces cell cycle arrest. Binds DNA and affects the expression of a number of genes so may function as a transcription factor in the nucleus.
