

# MLF1 Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP21370b

#### **Product Information**

**Application** WB, E **Primary Accession** P58340

**Reactivity** Human, Mouse

Host Rabbit
Clonality polyclonal
Isotype Rabbit IgG
Clone Names RB52626
Calculated MW 30627

#### **Additional Information**

**Gene ID** 4291

Other Names Myeloid leukemia factor 1, Myelodysplasia-myeloid leukemia factor 1, MLF1

**Target/Specificity** This MLF1 antibody is generated from a rabbit immunized with a KLH

conjugated synthetic peptide between 216-250 amino acids from the

C-terminal region of human MLF1.

**Dilution** WB~~1:2000 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** MLF1 Antibody (C-term) is for research use only and not for use in diagnostic

or therapeutic procedures.

#### **Protein Information**

Name MLF1

**Function** Involved in lineage commitment of primary hemopoietic progenitors by

restricting erythroid formation and enhancing myeloid formation. Interferes with erythropoietin-induced erythroid terminal differentiation by preventing cells from exiting the cell cycle through suppression of CDKN1B/p27Kip1 levels. Suppresses COP1 activity via CSN3 which activates p53 and induces cell cycle arrest. Binds DNA and affects the expression of a number of genes so

may function as a transcription factor in the nucleus.

**Cellular Location** Cytoplasm {ECO:0000250|UniProtKB:Q9QWV4}. Nucleus

{ECO:0000250|UniProtKB:Q9QWV4}. Cell projection, cilium

{ECO:0000250|UniProtKB:Q9QWV4}. Cytoplasm, cytoskeleton, cilium basal body {ECO:0000250|UniProtKB:Q9QWV4}. Note=Shuttles between the

cytoplasm and nucleus. {ECO:0000250|UniProtKB:Q9QWV4}

**Tissue Location** Most abundant in testis, ovary, skeletal muscle, heart, kidney and colon. Low

expression in spleen, thymus and peripheral blood leukocytes

### **Background**

Involved in lineage commitment of primary hemopoietic progenitors by restricting erythroid formation and enhancing myeloid formation. Interferes with erythropoietin-induced erythroid terminal differentiation by preventing cells from exiting the cell cycle through suppression of CDKN1B/p27Kip1 levels. Suppresses RFWD2/COP1 activity via CSN3 which activates p53 and induces cell cycle arrest. Binds DNA and affects the expression of a number of genes so may function as a transcription factor in the nucleus.
