

STK25 Antibody

Purified Rabbit Polyclonal Antibody (Pab)

Catalog # AP22291a

Product Information

Application	WB, E
Primary Accession	O00506
Reactivity	Human, Mouse
Predicted	Rat, Bovine, Canine, Chicken
Host	Rabbit
Clonality	polyclonal
Isotype	Rabbit IgG
Clone Names	RB56852
Calculated MW	48112

Additional Information

Gene ID	10494
Other Names	Serine/threonine-protein kinase 25, 2.7.11.1, Ste20-like kinase, Sterile 20/oxidant stress-response kinase 1, SOK-1, Ste20/oxidant stress response kinase 1, STK25, SOK1, YSK1
Target/Specificity	This STK25 antibody is generated from a rabbit immunized with a recombinant protein of human STK25.
Dilution	WB~~1:2000 E~~Use at an assay dependent concentration.
Format	Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.
Storage	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	STK25 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	STK25 (HGNC:11404)
Synonyms	SOK1, YSK1
Function	Oxidant stress-activated serine/threonine kinase that plays a role in metabolic homeostasis, neuronal polarization, cell migration, Golgi

organization, apoptosis or innate immunity. Targets to the Golgi apparatus where it appears to regulate protein transport events, cell adhesion, and polarity complexes important for cell migration. Part of the striatin-interacting phosphatase and kinase (STRIPAK) complexes. STRIPAK complexes have critical roles in protein (de)phosphorylation and are regulators of multiple signaling pathways including Hippo, MAPK, nuclear receptor and cytoskeleton remodeling. Different types of STRIPAK complexes are involved in a variety of biological processes such as cell growth, differentiation, apoptosis, metabolism and immune regulation (PubMed:[18782753](#)). Functions as an inhibitor of the PKA pathway by affecting phosphorylation of the PRKAR1A regulatory subunit, which in turn suppresses the kinase activity of the catalytic subunit (PubMed:[35977512](#)). Positively regulates the TLR signaling by directly phosphorylating the transcription factor IRF5 (PubMed:[40639948](#)).

Cellular Location

Cytoplasm. Golgi apparatus. Note=Localizes to the Golgi apparatus

Tissue Location

Ubiquitously expressed. Highest levels are found in testis, large intestine, brain and stomach followed by heart and lung

Background

Oxidant stress-activated serine/threonine kinase that may play a role in the response to environmental stress. Targets to the Golgi apparatus where it appears to regulate protein transport events, cell adhesion, and polarity complexes important for cell migration.
