

# Phospho-IL6ST(Y905) Antibody

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP3663a

### **Product Information**

**Application** DB, E **Primary Accession** P40189 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB21495 Calculated MW 103537

## **Additional Information**

**Gene ID** 3572

Other Names Interleukin-6 receptor subunit beta, IL-6 receptor subunit beta, IL-6R subunit

beta, IL-6R-beta, IL-6RB, CDw130, Interleukin-6 signal transducer, Membrane glycoprotein 130, gp130, Oncostatin-M receptor subunit alpha, CD130, IL6ST

Target/Specificity This IL6ST Antibody is generated from rabbits immunized with a KLH

conjugated synthetic phosphopeptide corresponding to amino acid residues

surrounding Y905 of human IL6ST.

**Dilution** DB~~1:500 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** Phospho-IL6ST(Y905) Antibody is for research use only and not for use in

diagnostic or therapeutic procedures.

## **Protein Information**

Name IL6ST ( HGNC:6021)

**Function** Signal-transducing molecule (PubMed: <u>2261637</u>). The receptor systems for

IL6, LIF, OSM, CNTF, IL11, CTF1 and BSF3 can utilize IL6ST for initiating signal transmission. Binding of IL6 to IL6R induces IL6ST homodimerization and formation of a high-affinity receptor complex, which activates the intracellular

JAK-MAPK and JAK-STAT3 signaling pathways (PubMed: 19915009, PubMed: 2261637, PubMed: 23294003). That causes phosphorylation of IL6ST tyrosine residues which in turn activates STAT3 (PubMed: 19915009, PubMed: 23294003, PubMed: 25731159). In parallel, the IL6 signaling pathway induces the expression of two cytokine receptor signaling inhibitors, SOCS1 and SOCS3, which inhibit JAK and terminate the activity of the IL6 signaling pathway as a negative feedback loop (By similarity). Also activates the yesassociated protein 1 (YAP) and NOTCH pathways to control inflammationinduced epithelial regeneration, independently of STAT3 (By similarity). Acts as a receptor for the neuroprotective peptide humanin as part of a complex with IL27RA/WSX1 and CNTFR (PubMed: 19386761). Mediates signals which regulate immune response, hematopoiesis, pain control and bone metabolism (By similarity). Has a role in embryonic development (By similarity). Essential for survival of motor and sensory neurons and for differentiation of astrocytes (By similarity). Required for expression of TRPA1 in nociceptive neurons (By similarity). Required for the maintenance of PTH1R expression in the osteoblast lineage and for the stimulation of PTH-induced osteoblast differentiation (By similarity). Required for normal trabecular bone mass and cortical bone composition (By similarity).

**Cellular Location** 

[Isoform 1]: Cell membrane; Single-pass type I membrane protein

**Tissue Location** 

Found in all the tissues and cell lines examined (PubMed:2261637). Expression not restricted to IL6 responsive cells (PubMed:2261637).

# **Background**

IL6ST is a signal transducer shared by many cytokines, including interleukin 6 (IL6), ciliary neurotrophic factor (CNTF), leukemia inhibitory factor (LIF), and oncostatin M (OSM). This protein functions as a part of the cytokine receptor complex. The activation of this protein is dependent upon the binding of cytokines to their receptors. vIL6, a protein related to IL6 and encoded by the Kaposi sarcoma-associated herpesvirus, can bypass the interleukin 6 receptor (IL6R) and directly activate this protein.
