

Phospho-BAD(T137) Antibody

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP3777h

Product Information

Application DB, E Primary Accession Q92934

Other Accession 035147, Q61337, NP_004313.1

Reactivity
Predicted
Mouse, Rat
Host
Rabbit
Clonality
Polyclonal
Isotype
Rabbit IgG
Clone Names
RB39147
Calculated MW
Human
Mouse, Rat
Rabbit
Rabbit
Rabbit
RB392

Additional Information

Gene ID 572

Other Names Bcl2-associated agonist of cell death, BAD, Bcl-2-binding component 6,

Bcl-2-like protein 8, Bcl2-L-8, Bcl-xL/Bcl-2-associated death promoter, Bcl2

antagonist of cell death, BAD, BBC6, BCL2L8

Target/Specificity This BAD Antibody is generated from rabbits immunized with a KLH

conjugated synthetic phosphopeptide corresponding to amino acid residues

surrounding T137 of human BAD.

Dilution DB~~1:500 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions Phospho-BAD(T137) Antibody is for research use only and not for use in

diagnostic or therapeutic procedures.

Protein Information

Name BAD

Synonyms BBC6, BCL2L8

Function Promotes cell death. Successfully competes for the binding to Bcl-X(L), Bcl-2

and Bcl-W, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-X(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor receptor

signaling and the apoptotic pathways.

Cellular Location Mitochondrion outer membrane. Cytoplasm

{ECO:0000250 | UniProtKB:Q61337}. Note=Colocalizes with HIF3A in the cytoplasm (By similarity). Upon phosphorylation, locates to the cytoplasm.

{ECO:0000250 | UniProtKB:Q61337}

Tissue Location Expressed in a wide variety of tissues.

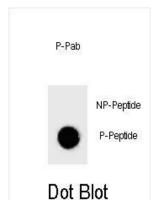

Background

The protein encoded by this gene is a member of the BCL-2 family. BCL-2 family members are known to be regulators of programmed cell death. This protein positively regulates cell apoptosis by forming heterodimers with BCL-xL and BCL-2, and reversing their death repressor activity. Proapoptotic activity of this protein is regulated through its phosphorylation. Protein kinases AKT and MAP kinase, as well as protein phosphatase calcineurin were found to be involved in the regulation of this protein. Alternative splicing of this gene results in two transcript variants which encode the same isoform. [provided by RefSeq].
