

# Phospho-KIT(Y578) Antibody

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP3784k

## **Product Information**

Application DB, E Primary Accession P10721

Other Accession <u>Q2HWD6, P05532, Q08156, P43481, NP 000213.1</u>

Reactivity Human

**Predicted** Bovine, Chicken, Mouse, Pig

HostRabbitClonalityPolyclonalIsotypeRabbit IgGClone NamesRB39725Calculated MW109865

## **Additional Information**

**Gene ID** 3815

Other Names Mast/stem cell growth factor receptor Kit, SCFR, Piebald trait protein, PBT,

Proto-oncogene c-Kit, Tyrosine-protein kinase Kit, p145 c-kit, v-kit

Hardy-Zuckerman 4 feline sarcoma viral oncogene homolog, CD117, KIT, SCFR

**Target/Specificity** This KIT Antibody is generated from rabbits immunized with a KLH conjugated

synthetic phosphopeptide corresponding to amino acid residues surrounding

Y578 of human KIT.

**Dilution** DB~~1:500 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is purified through a protein A column, followed by peptide

affinity purification.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** Phospho-KIT(Y578) Antibody is for research use only and not for use in

diagnostic or therapeutic procedures.

## **Protein Information**

Name KIT

**Synonyms** SCFR

#### **Function**

Tyrosine-protein kinase that acts as a cell-surface receptor for the cytokine KITLG/SCF and plays an essential role in the regulation of cell survival and proliferation, hematopoiesis, stem cell maintenance, gametogenesis, mast cell development, migration and function, and in melanogenesis. In response to KITLG/SCF binding, KIT can activate several signaling pathways. Phosphorylates PIK3R1, PLCG1, SH2B2/APS and CBL. Activates the AKT1 signaling pathway by phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase. Activated KIT also transmits signals via GRB2 and activation of RAS, RAF1 and the MAP kinases MAPK1/ERK2 and/or MAPK3/ERK1. Promotes activation of STAT family members STAT1, STAT3, STAT5A and STAT5B. Activation of PLCG1 leads to the production of the cellular signaling molecules diacylglycerol and inositol 1,4,5- trisphosphate. KIT signaling is modulated by protein phosphatases, and by rapid internalization and degradation of the receptor. Activated KIT promotes phosphorylation of the protein phosphatases PTPN6/SHP-1 and PTPRU, and of the transcription factors STAT1, STAT3, STAT5A and STAT5B. Promotes phosphorylation of PIK3R1, CBL, CRK (isoform Crk-II), LYN, MAPK1/ERK2 and/or MAPK3/ERK1, PLCG1, SRC and SHC1.

**Cellular Location** 

[Isoform 1]: Cell membrane; Single-pass type I membrane protein [Isoform 3]: Cytoplasm. Note=Detected in the cytoplasm of spermatozoa, especially in the equatorial and subacrosomal region of the sperm head.

**Tissue Location** 

[Isoform 3]: In testis, detected in spermatogonia in the basal layer and in interstitial Leydig cells but not in Sertoli cells or spermatocytes inside the seminiferous tubules (at protein level) (PubMed:20601678). Expression is maintained in ejaculated spermatozoa (at protein level) (PubMed:20601678)

# **Background**

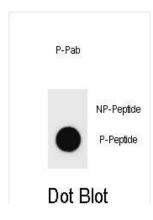

This gene encodes the human homolog of the proto-oncogene c-kit. C-kit was first identified as the cellular homolog of the feline sarcoma viral oncogene v-kit. This protein is a type 3 transmembrane receptor for MGF (mast cell growth factor, also known as stem cell factor). Mutations in this gene are associated with gastrointestinal stromal tumors, mast cell disease, acute myelogenous lukemia, and piebaldism. Multiple transcript variants encoding different isoforms have been found for this gene.
