Background

The protein encoded by this gene is a regulatory protein involved in mitosis. The gene product complexes with p34(cdc2) to form the maturation-promoting factor (MPF). Two alternative transcripts have been found, a constitutively expressed transcript and a cell cycle-regulated transcript, that is expressed predominantly during G2/M phase. The different transcripts result from the use of alternate transcription initiation sites. [provided by RefSeq].

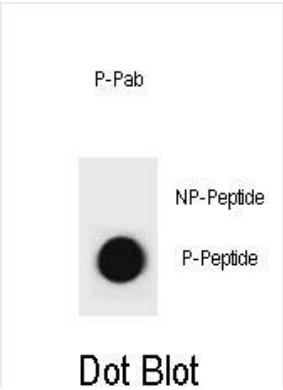
Western blot analysis of lysate from Hela cells(from left to right),untreated or treated with Nocodazole at 50ng/ml,using Phospho-CCNB1-S35 Antibody (Cat. #AP3882a) or CCNB1-S9 Antibody.Lysate at 15ug per lane.AP3882a was diluted at 1:1100 dilution at each lane. A goat anti-rabbit IgG H&L (HRP) at 1:5000 dilution was used as the secondary antibody.



Dot blot analysis of CCNB1 Antibody (Phospho S35) Phospho-specific Pab (Cat. #AP3882a) on nitrocellulose membrane. 50ng of Phospho-peptide or Non Phospho-peptide per dot were adsorbed. Antibody working concentrations are 0.6ug per ml.
