Western blot analysis of ANKRD20A3 expression in H1792 (A) whole cell lysates. (Predicted band size: 94 kD; Observed band size: 94 kD)

Immunohistochemical analysis of ANKRD20A3 staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
