

Caspase 5 p10 Antibody

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP51964

Product Information

Application WB Primary Accession P51878

Reactivity Human, Mouse, Rat

HostRabbitClonalityPolyclonalCalculated MW49736

Additional Information

Gene ID 838

Other Names Caspase-5, CASP-5, ICE(rel)-III, Protease ICH-3, Protease TY, Caspase-5 subunit

p20, Caspase-5 subunit p10, CASP5, ICH3

Target/Specificity KLH-conjugated synthetic peptide encompassing a sequence within the

C-term region of human Caspase 5 p10. The exact sequence is proprietary.

Dilution WB~~1:1000

Format 0.01M PBS, pH 7.2, 0.09% (W/V) Sodium azide, Glycerol 50%

Storage Store at -20 °C.Stable for 12 months from date of receipt

Protein Information

Name CASP5 {ECO:0000303 | PubMed:16893518, ECO:0000312 | HGNC:HGNC:1506}

Function Thiol protease that acts as a mediator of programmed cell death

(PubMed: <u>28314590</u>, PubMed: <u>29898893</u>). Initiates pyroptosis, a programmed lytic cell death pathway through cleavage of Gasdermin-D (GSDMD): cleavage releases the N-terminal gasdermin moiety (Gasdermin-D, N-terminal) that

binds to membranes and forms pores, triggering pyroptosis

(PubMed:<u>29898893</u>). Also mediates cleavage and maturation of IL18 (PubMed:<u>37993714</u>). Cleavage of GSDMD and IL18 is not strictly dependent on the consensus cleavage site but depends on an exosite interface on CASP4 (PubMed:<u>37993714</u>). During non-canonical inflammasome activation, cuts CGAS and may play a role in the regulation of antiviral innate immune

activation (PubMed: 28314590).

Tissue Location Expressed in barely detectable amounts in most tissues except brain, highest

levels being found in lung, liver and skeletal muscle.

Background

Mediator of programmed cell death (apoptosis).
