| <b>DISEASE</b>                 | Defects in XIAP are the cause of lymphoproliferative syndrome X-linked type 2 (XLP2) [MIM:300635]. XLP is a rare immunodeficiency characterized by extreme susceptibility to infection with Epstein-Barr virus (EBV). Symptoms include severe or fatal mononucleosis, acquired hypogammaglobulinemia, pancytopenia and malignant lymphoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Background Descriptions</b> | This gene encodes a protein that belongs to a family of apoptotic suppressor proteins. Members of this family share a conserved motif termed, baculovirus IAP repeat, which is necessary for their anti-apoptotic function. This protein functions through binding to tumor necrosis factor receptor-associated factors TRAF1 and TRAF2 and inhibits apoptosis induced by menadione, a potent inducer of free radicals, and interleukin 1-beta converting enzyme. This protein also inhibits at least two members of the caspase family of cell-death proteases, caspase-3 and caspase-7. Mutations in this gene are the cause of X-linked lymphoproliferative syndrome. Alternate splicing results in multiple transcript variants. Pseudogenes of this gene are found on chromosomes 2 and 11.[provided by RefSeq, Feb 2011] |

| <b>Other Names</b> | E3 ubiquitin-protein ligase XIAP, 2.3.2.27, Baculoviral IAP repeat-containing protein 4, IAP-like protein, ILP, hILP, Inhibitor of apoptosis protein 3, IAP-3, hIAP-3, hIAP3, RING-type E3 ubiquitin transferase XIAP, X-linked inhibitor of apoptosis protein, X-linked IAP, XIAP {ECO:0000303   PubMed:12121969, ECO:0000312   HGNC:HGNC:592} |

|                 |                                                                                                                                                                                                 |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Dilution</b> | WB=1:500-2000,IHC-P=1:100-500,IHC-F=1:100-500,ICC/IF=1:100-500,IF=1:100-500,Flow-Cyt=3ug/Test                                                                                                   |
| <b>Storage</b>  | Store at -20 °C for one year. Avoid repeated freeze/thaw cycles. When reconstituted in sterile pH 7.4 0.01M PBS or diluent of antibody the antibody is stable for at least two weeks at 2-4 °C. |

## Protein Information

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Function</b> | <p>Multi-functional protein which regulates not only caspases and apoptosis, but also modulates inflammatory signaling and immunity, copper homeostasis, mitogenic kinase signaling, cell proliferation, as well as cell invasion and metastasis (PubMed:<a href="#">11257230</a>, PubMed:<a href="#">11257231</a>, PubMed:<a href="#">11447297</a>, PubMed:<a href="#">12121969</a>, PubMed:<a href="#">12620238</a>, PubMed:<a href="#">17560374</a>, PubMed:<a href="#">17967870</a>, PubMed:<a href="#">19473982</a>, PubMed:<a href="#">20154138</a>, PubMed:<a href="#">22103349</a>, PubMed:<a href="#">9230442</a>). Acts as a direct caspase inhibitor (PubMed:<a href="#">11257230</a>, PubMed:<a href="#">11257231</a>, PubMed:<a href="#">12620238</a>). Directly bind to the active site pocket of CASP3 and CASP7 and obstructs substrate entry (PubMed:<a href="#">11257230</a>, PubMed:<a href="#">11257231</a>, PubMed:<a href="#">16352606</a>, PubMed:<a href="#">16916640</a>). Inactivates CASP9 by keeping it in a monomeric, inactive state (PubMed:<a href="#">12620238</a>). Acts as an E3 ubiquitin-protein ligase regulating NF-kappa-B signaling and the target proteins for its E3 ubiquitin- protein ligase activity include: RIPK1, RIPK2, MAP3K2/MEKK2, DIABLO/SMAC, AIFM1, CCS, PTEN and BIRC5/survivin (PubMed:<a href="#">17560374</a>, PubMed:<a href="#">17967870</a>, PubMed:<a href="#">19473982</a>, PubMed:<a href="#">20154138</a>, PubMed:<a href="#">22103349</a>, PubMed:<a href="#">22607974</a>, PubMed:<a href="#">29452636</a>, PubMed:<a href="#">30026309</a>). Acts as an important regulator of innate immunity by mediating 'Lys-63'-linked polyubiquitination of RIPK2 downstream of NOD1 and NOD2, thereby transforming RIPK2 into a scaffolding protein for downstream effectors, ultimately leading to activation of the NF-kappa-B and MAP kinases signaling (PubMed:<a href="#">19667203</a>, PubMed:<a href="#">22607974</a>, PubMed:<a href="#">29452636</a>, PubMed:<a href="#">30026309</a>). 'Lys-63'-linked polyubiquitination of RIPK2 also promotes recruitment of the LUBAC complex to RIPK2 (PubMed:<a href="#">22607974</a>, PubMed:<a href="#">29452636</a>). Regulates the BMP signaling pathway and the SMAD and MAP3K7/TAK1 dependent pathways leading to NF-kappa-B and JNK activation (PubMed:<a href="#">17560374</a>). Ubiquitination of CCS leads to enhancement of its chaperone activity toward its physiologic target, SOD1, rather than proteasomal degradation (PubMed:<a href="#">20154138</a>). Ubiquitination of MAP3K2/MEKK2 and AIFM1 does not lead to proteasomal degradation (PubMed:<a href="#">17967870</a>, PubMed:<a href="#">22103349</a>). Plays a role in copper homeostasis by ubiquitinating COMMD1 and promoting its proteasomal degradation (PubMed:<a href="#">14685266</a>). Can also function as E3 ubiquitin-protein ligase of the NEDD8 conjugation pathway, targeting effector caspases for neddylation and inactivation (PubMed:<a href="#">21145488</a>). Ubiquitinates and therefore mediates the proteasomal degradation of BCL2 in response to apoptosis (PubMed:<a href="#">29020630</a>). Protects cells from spontaneous formation of the ripoptosome, a large multi-protein complex that has the capability to kill cancer cells in a caspase-dependent and caspase- independent manner (PubMed:<a href="#">22095281</a>). Suppresses ripoptosome formation by ubiquitinating RIPK1 and CASP8 (PubMed:<a href="#">22095281</a>). Acts as a positive regulator of Wnt signaling and ubiquitinates TLE1, TLE2, TLE3, TLE4 and AES (PubMed:<a href="#">22304967</a>). Ubiquitination of TLE3 results in inhibition of its interaction with TCF7L2/TCF4 thereby allowing efficient recruitment and binding of the transcriptional coactivator beta-catenin to TCF7L2/TCF4 that is required to initiate a Wnt-specific transcriptional program (PubMed:<a href="#">22304967</a>).</p> |

|                          |                                                                                                                                    |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cellular Location</b> | Cytoplasm. Nucleus. Note=TLE3 promotes its nuclear localization.                                                                   |
| <b>Tissue Location</b>   | Expressed in colonic crypts (at protein level) (PubMed:30389919). Ubiquitous, except peripheral blood leukocytes (PubMed:8654366). |

## Background

This product as supplied is intended for research use only, not for use in human, therapeutic or diagnostic applications.

## Images

Blank control (Black line): HUVEC(Black).  
 Primary Antibody (green line): Rabbit Anti-XIAP antibody (AP52278)  
 Dilution: 1 µg /10<sup>6</sup> cells;  
 Isotype Control Antibody (orange line): Rabbit IgG .  
 Secondary Antibody (white blue line): Goat anti-rabbit IgG-PE

Dilution: 1 µg /test.

### Protocol

The cells were fixed with 4% PFA (10min at room temperature)and then permeabilized with 90% ice-cold methanol for 20 min at room temperature. The cells were then incubated in 5%BSA to block non-specific protein-protein interactions for 30 min at room temperature .Cells stained with Primary Antibody for 30 min at room temperature. The secondary antibody used for 40 min at room temperature. Acquisition of 20,000 events was performed.

Tissue/cell:HeLa cell; 4% Paraformaldehyde-fixed; Triton X-100 at room temperature for 20 min; Blocking buffer (normal goat serum,C-0005) at 37°C for 20 min; Antibody incubation with (XIAP/BIRC4) polyclonal Antibody, Unconjugated (AP52278) 1:100, 90 minutes at 37°C; followed by a FITC conjugated Goat Anti-Rabbit IgG antibody at 37°C for 90 minutes, DAPI (blue, C02-04002) was used to stain the cell nuclei.

### Sample:

Lymph node(Mouse) Lysate at 40 ug  
 Bone(Mouse) Lysate at 40 ug

Primary: Anti-XIAP/BIRC4(AP52278) at 1/300 dilution  
 Secondary: IRDye800CW Goat Anti-Rabbit IgG at 1/20000 dilution  
 Predicted band size: 55 kD  
 Observed band size: 53 kD

Tissue/cell: rat brain tissue;4% Paraformaldehyde-fixed and paraffin-embedded;  
 Antigen retrieval: citrate buffer ( 0.01M, pH 6.0 ), Boiling bathing for 15min; Blocking buffer (normal goat serum,C-0005) at 37°C for 20 min;  
 Incubation: Anti-XIAP/BIRC4 Polyclonal Antibody, Unconjugated(AP52278) 1:200, overnight at 4°C; The secondary antibody was Goat Anti-Rabbit IgG, PE conjugated(AP52278-PE)used at 1:200 dilution for 40 minutes at 37°C. DAPI(5ug/ml,blue,C-0033) was used to stain the cell nuclei
