## Protein Information

---

<b>Name</b>	HTRA2
<b>Synonyms</b>	OMI, PRSS25
<b>Function</b>	[Isoform 1]: Serine protease that shows proteolytic activity against a non-specific substrate beta-casein (PubMed: <a href="#">10873535</a> ). Promotes apoptosis by either relieving the inhibition of BIRC proteins on caspases, leading to an increase in caspase activity; or by a BIRC inhibition-independent, caspase-independent and serine protease activity-dependent mechanism (PubMed: <a href="#">15200957</a> ). Cleaves BIRC6 and relieves its inhibition on CASP3, CASP7 and CASP9, but it is also prone to inhibition by BIRC6 (PubMed: <a href="#">36758104</a> , PubMed: <a href="#">36758105</a> ). Cleaves THAP5 and promotes its

degradation during apoptosis (PubMed:[19502560](#)).

## Cellular Location

Mitochondrion intermembrane space. Mitochondrion membrane; Single-pass membrane protein Note=Predominantly present in the intermembrane space. Released into the cytosol following apoptotic stimuli, such as UV treatment, and stimulation of mitochondria with caspase-8 truncated BID/tBID

## Tissue Location

[Isoform 1]: Ubiquitously expressed.

## Background

Serine protease that shows proteolytic activity against a non-specific substrate beta-casein. Promotes or induces cell death either by direct binding to and inhibition of BIRC proteins (also called inhibitor of apoptosis proteins, IAPs), leading to an inc
