#### **Protein Information**

Name CALCA ( HGNC:1437)

Synonyms CALC1

**Function** [Calcitonin]: Calcitonin is a peptide hormone that causes a rapid but

short-lived drop in the level of calcium and phosphate in blood by promoting the incorporation of those ions in the bones. Calcitonin function is mediated by the calcitonin receptor/CALCR and the CALCR-RAMP2 (AMYR2) receptor

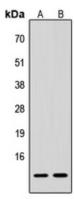

complex (PubMed:35324283).

**Cellular Location** Secreted.

# **Background**

Rabbit polyclonal antibody to Procalcitonin
