

# GTF2F1 Polyclonal Antibody

Purified Rabbit Polyclonal Antibody (Pab)

Catalog # AP56225

## Product Information

---

|                          |                          |
|--------------------------|--------------------------|
| <b>Application</b>       | IHC-P, IHC-F, IF, ICC, E |
| <b>Primary Accession</b> | <a href="#">P35269</a>   |
| <b>Reactivity</b>        | Rat, Pig, Dog, Bovine    |
| <b>Host</b>              | Rabbit                   |
| <b>Clonality</b>         | Polyclonal               |
| <b>Calculated MW</b>     | 58240                    |

## Additional Information

---

|                    |                                                                                                                                                                                                                   |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gene ID</b>     | 2962                                                                                                                                                                                                              |
| <b>Other Names</b> | General transcription factor IIF subunit 1, General transcription factor IIF 74 kDa subunit, Transcription initiation factor IIF subunit alpha, TFIIF-alpha, Transcription initiation factor RAP74, GTF2F1, RAP74 |
| <b>Dilution</b>    | IHC-P=1:100-500,IHC-F=1:100-500,ICC=1:100-500,IF=1:100-500,ELISA=1:5000-10000                                                                                                                                     |
| <b>Storage</b>     | Store at -20 °C for one year. Avoid repeated freeze/thaw cycles. When reconstituted in sterile pH 7.4 0.01M PBS or diluent of antibody the antibody is stable for at least two weeks at 2-4 °C.                   |

## Protein Information

---

|                          |                                                                                                                                                                                                         |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>              | GTF2F1                                                                                                                                                                                                  |
| <b>Synonyms</b>          | RAP74                                                                                                                                                                                                   |
| <b>Function</b>          | TFIIF is a general transcription initiation factor that binds to RNA polymerase II and helps to recruit it to the initiation complex in collaboration with TFIIB. It promotes transcription elongation. |
| <b>Cellular Location</b> | Nucleus.                                                                                                                                                                                                |
