| <b>Background Descriptions</b> | <p>ZNF827 (zinc finger protein 827) is a 1,081 amino acid nuclear protein that contains nine C2H2-type zinc fingers and belongs to the krueppel C2H2-type zinc-finger protein family. Existing as three alternatively spliced isoforms, ZNF827 may be involved in transcriptional regulation. The gene that encodes ZNF827 consists of around 181,000 bases and maps to human chromosome 4q31.2. Chromosome 4 represents approximately 6% of the human genome and contains nearly 900 genes. Notably, the Huntingtin gene, which is found to encode an expanded glutamine tract in cases of Huntington's disease, is encoded by a gene that maps to chromosome 4. FGFR-3 is also encoded by a gene located on chromosome 4 and has been associated with thanatophoric dwarfism, achondroplasia, Muenke syndrome and bladder cancer. Chromosome 4 is also tied to Ellis-van Creveld syndrome, methylmalonic acidemia and polycystic kidney disease.</p> |

| <b>Name</b>              | ZNF827                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Function</b>          | As part of a ribonucleoprotein complex composed at least of HNRNPK, HNRNPL and the circular RNA circZNF827 that nucleates the complex on chromatin, may negatively regulate the transcription of genes involved in neuronal differentiation (PubMed: <a href="#">33174841</a> ). Could also recruit the nucleosome remodeling and histone deacetylase/NuRD complex to telomeric regions of chromosomes to regulate chromatin remodeling as part of telomere maintenance (PubMed: <a href="#">25150861</a> ). |
| <b>Cellular Location</b> | Nucleus. Chromosome, telomere                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
