Protein Information

Name	PLCG2 (HGNC:9066)
Function	The production of the second messenger molecules diacylglycerol (DAG) and inositol 1,4,5-trisphosphate (IP3) is mediated by activated phosphatidylinositol-specific phospholipase C enzymes (PubMed: 19394299 , PubMed: 23000145). It is a crucial enzyme in transmembrane signaling (PubMed: 23000145).
Cellular Location	Membrane raft {ECO:0000250 UniProtKB:Q8CIH5}.

Western blot analysis of PLC gamma 2 (Phospho-Y1217) expression in HCT116-EGF (A), Myla2059 (B) whole cell lysates. (Predicted band size: 147 kD; Observed band size: 150 kD)

Immunohistochemical analysis of PLC gamma 2 (Phospho-Y1217) staining in human tonsil formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of PLC gamma 2 (Phospho-Y1217) staining in HeLa cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with a AF594-conjugated secondary antibody (red) in PBS at room temperature in the dark.
