## Background

KLH-conjugated synthetic peptide encompassing a sequence within the N-term region of human ZEB2. The exact sequence is proprietary.

Western blot analysis of ZEB2 expression in mouse liver (A) whole cell lysates.

Immunohistochemical analysis of ZEB2 staining in human colon cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
