Protein Information

Name	MYBPC1
Synonyms	MYBPCS
Function	Thick filament-associated protein located in the crossbridge region of vertebrate striated muscle a bands. Slow skeletal protein that binds to both myosin and actin (PubMed:31025394, PubMed:31264822). In vitro, binds to native thin filaments and modifies the activity of actin-activated myosin ATPase. May modulate muscle contraction or may play a more structural role.

Background

KLH-conjugated synthetic peptide encompassing a sequence within the center region of human MYBPC1. The exact sequence is proprietary.
