## Protein Information

---

Name	PPP1R12A ( <a href="#">HGNC:7618</a> )
Function	Key regulator of protein phosphatase 1C (PPP1C). Mediates binding to myosin. As part of the PPP1C complex, involved in dephosphorylation of PLK1. Capable of inhibiting HIF1AN-dependent suppression of HIF1A activity.
Cellular Location	Cytoplasm. Cytoplasm, cytoskeleton, stress fiber. Note=Also along actomyosin filaments
Tissue Location	Expressed in striated muscles, specifically in type 2a fibers (at protein level).

## Background

---

KLH-conjugated synthetic peptide encompassing a sequence within the center region of human MYPT1. The exact sequence is proprietary.

## Images

---

Western blot analysis of MYPT1 (pT853) expression in C6 (A), MCF7 (B) whole cell lysates.

Immunohistochemical analysis of MYPT1 (pT853) staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
