Images

Western blot analysis of ZC3H7B expression in U87MG (A), PC3 (B), HEK293T (C), Hela (D), CT26 (E), PC12 (F) whole cell lysates.

Immunohistochemical analysis of ZC3H7B staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
