Protein Information

Name	JUNB
Function	Transcription factor involved in regulating gene activity following the primary growth factor response. Binds to the DNA sequence 5'-TGA[GC]TCA-3'. Heterodimerizes with proteins of the FOS family to form an AP-1 transcription complex, thereby enhancing its DNA binding activity to an AP-1 consensus sequence and its transcriptional activity (By similarity).
Cellular Location	Nucleus.

Background

KLH-conjugated synthetic peptide encompassing a sequence within the center region of human JUNB. The

exact sequence is proprietary.

Images

Western blot analysis of JUNB expression in mouse muscle (A), mouse liver (B), rat muscle (C), rat liver (D) whole cell lysates.

Immunohistochemical analysis of JUNB staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
