Protein Information

Name	ITGAX
Synonyms	CD11C
Function	Integrin alpha-X/beta-2 is a receptor for fibrinogen. It recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis.
Cellular Location	Membrane; Single-pass type I membrane protein.
Tissue Location	Predominantly expressed in monocytes and granulocytes

Background

KLH-conjugated synthetic peptide encompassing a sequence within the center region of human CD11c. The exact sequence is proprietary.

Images

Western blot analysis of CD11c expression in U87MG (A), A549 (B), Myla2059 (C) whole cell lysates.

Immunohistochemical analysis of CD11c staining in human spleen formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
