#### **Protein Information**

Name H4C1

**Synonyms** H4/A, H4FA, HIST1H4A

**Function** Core component of nucleosome. Nucleosomes wrap and compact DNA into

chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications

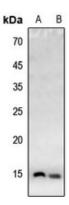

of histones, also called histone code, and nucleosome remodeling.

Nucleus {ECO:0000250 | UniProtKB:P62806}. Chromosome. Note=Localized to
