## Protein Information

Name	H4C1
Synonyms	H4/A, H4FA, HIST1H4A
Function	<p>Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.</p> <p>Nucleus {ECO:0000250 UniProtKB:P62806}. Chromosome. Note=Localized to</p>

## Cellular Location

the nucleus when acetylated in step 11 spermatids.

KLH-conjugated synthetic peptide encompassing a sequence within the N-term region of human Histone H4 with a site at MonoMethyl-K12. The exact sequence is proprietary.

## Images

Western blot analysis of Histone H4 (MonoMethyl-K12) expression in HEK293T (A), H446 (B), H1688 (C) whole cell lysates.

Direct ELISA antibody dose-response curve using Anti-Histone H4 (MonoMethyl-K12) Antibody. Antigen (methyl-peptide and non-methyl-peptide) concentration is 5 ug/ml. Goat Anti-Rabbit IgG (H&L) - HRP was used as the secondary antibody, and signal was developed by TMB substrate.
