Protein Information

Name	RCAN3
Synonyms	DSCR1L2
Function	Inhibits calcineurin-dependent transcriptional responses by binding to the

catalytic domain of calcineurin A. Could play a role during central nervous system development (By similarity).

Tissue Location

Highest expression in heart, skeletal muscle kidney, liver and peripheral blood leukocytes. Lower expression in all other tissues

Background

DSCR1L2 inhibits calcineurin-dependent transcriptional responses by binding to the catalytic domain of calcineurin A, and may play a role during central nervous system development. Highest expression occurs in heart, skeletal muscle kidney, liver and peripheral blood leukocytes.

Images

The anti-DSCR1L2 Pab (Cat. #AP6310a) is used in Western blot to detect DSCR1L2 in mouse heart tissue lysate.
