Protein Information

Name KCNIP3

Synonyms CSEN, DREAM, KCHIP3

Function Calcium-dependent transcriptional repressor that binds to the DRE element

of genes including PDYN and FOS. Affinity for DNA is reduced upon binding to calcium and enhanced by binding to magnesium. Seems to be involved in

nociception (By similarity).

Cellular Location Cytoplasm. Cell membrane; Lipid-anchor. Endoplasmic reticulum. Golgi

apparatus. Nucleus. Note=Also membrane-bound, associated with the plasma membrane (PubMed:15485870). In the presence of PSEN2 associated with the endoplasmic reticulum and Golgi. The sumoylated form is present only in the

nucleus.

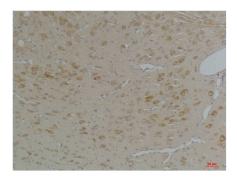

Tissue Location Highly expressed in brain. Widely expressed at lower levels. Expression levels

are elevated in brain cortex regions affected by Alzheimer disease.

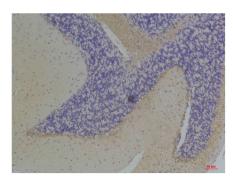

Background

Calcium-dependent transcriptional repressor that binds to the DRE element of genes including PDYN and FOS. Affinity for DNA is reduced upon binding to calcium and enhanced by binding to magnesium. Seems to be involved in nociception (By similarity).
