

# Sp1 (phospho Thr739) Polyclonal Antibody

Catalog # AP67180

## **Product Information**

**Application** WB, IHC-P, IF, ICC, E

Primary Accession P08047

Reactivity Human, Mouse, Rat, Monkey

Host Rabbit
Clonality Polyclonal
Calculated MW 80693

## **Additional Information**

Gene ID 6667

Other Names SP1; TSFP1; Transcription factor Sp1

**Dilution** WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300.

ELISA: 1/5000. Not yet tested in other applications. IHC-P~~N/A IF~~1:50~200

ICC~~N/A E~~N/A

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

#### **Protein Information**

Name SP1

Synonyms TSFP1

**Function** Transcription factor that can activate or repress transcription in response to

physiological and pathological stimuli. Binds with high affinity to GC-rich motifs and regulates the expression of a large number of genes involved in a variety of processes such as cell growth, apoptosis, differentiation and immune responses. Highly regulated by post-translational modifications (phosphorylations, sumoylation, proteolytic cleavage, glycosylation and acetylation). Also binds the PDGFR-alpha G-box promoter. May have a role in modulating the cellular response to DNA damage. Implicated in chromatin remodeling. Plays an essential role in the regulation of FE65 gene expression. In complex with ATF7IP, maintains telomerase activity in cancer cells by inducing TERT and TERC gene expression. Isoform 3 is a stronger activator of transcription than isoform 1. Positively regulates the transcription of the core

clock component BMAL1 (PubMed:<u>10391891</u>, PubMed:<u>11371615</u>, PubMed:<u>11904305</u>, PubMed:<u>14593115</u>, PubMed:<u>16377629</u>, PubMed:<u>16478997</u>, PubMed:<u>16943418</u>, PubMed:<u>17049555</u>,

PubMed:<u>18171990</u>, PubMed:<u>18199680</u>, PubMed:<u>18239466</u>, PubMed:<u>18513490</u>, PubMed:<u>18619531</u>, PubMed:<u>19193796</u>,

PubMed: 20091743, PubMed: 21046154, PubMed: 21798247). Plays a role in the recruitment of SMARCA4/BRG1 on the c-FOS promoter. Plays a role in protecting cells against oxidative stress following brain injury by regulating

the expression of RNF112 (By similarity).

**Cellular Location** Nucleus. Cytoplasm. Note=Nuclear location is governed by

glycosylated/phosphorylated states. Insulin promotes nuclear location, while

glucagon favors cytoplasmic location

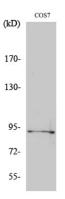

**Tissue Location** Up-regulated in adenocarcinomas of the stomach (at protein level). Isoform 3

is ubiquitously expressed at low levels

# **Background**

Transcription factor that can activate or repress transcription in response to physiological and pathological stimuli. Binds with high affinity to GC-rich motifs and regulates the expression of a large number of genes involved in a variety of processes such as cell growth, apoptosis, differentiation and immune responses. Highly regulated by post-translational modifications (phosphorylations, sumoylation, proteolytic cleavage, glycosylation and acetylation). Binds also the PDGFR- alpha G-box promoter. May have a role in modulating the cellular response to DNA damage. Implicated in chromatin remodeling. Plays an essential role in the regulation of FE65 gene expression. In complex with ATF7IP, maintains telomerase activity in cancer cells by inducing TERT and TERC gene expression. Isoform 3 is a stronger activator of transcription than isoform 1. Positively regulates the transcription of the core clock component ARNTL/BMAL1 (PubMed:10391891, PubMed:11371615, PubMed:11904305, PubMed:14593115, PubMed:16377629, PubMed:16478997, PubMed:16943418, PubMed:17049555, PubMed:18171990, PubMed:18199680, PubMed:18239466, PubMed:18513490, PubMed:18619531, PubMed:19193796, PubMed:20091743, PubMed:21798247). Plays a role in the recruitment of SMARCA4/BRG1 on the c-FOS promoter. Plays a role in protecting cells against oxidative stress following brain injury by regulating the expression of RNF112 (By similarity).
