Protein Information

Name PBK

Synonyms TOPK

Function Phosphorylates MAP kinase p38. Seems to be active only in mitosis. May also

play a role in the activation of lymphoid cells. When phosphorylated, forms a complex with TP53, leading to TP53 destabilization and attenuation of G2/M

checkpoint during doxorubicin- induced DNA damage.

Tissue Location Expressed in the testis and placenta. In the testis, restrictedly expressed in

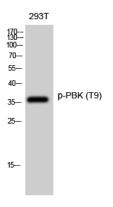

outer cell layer of seminiferous tubules.
