#### **Protein Information**

Name PTPN1

Synonyms PTP1B

**Function** Tyrosine-protein phosphatase which acts as a regulator of endoplasmic

reticulum unfolded protein response. Mediates dephosphorylation of EIF2AK3/PERK; inactivating the protein kinase activity of EIF2AK3/PERK. May play an important role in CKII- and p60c- src-induced signal transduction cascades. May regulate the EFNA5-EPHA3 signaling pathway which modulates cell reorganization and cell-cell repulsion. May also regulate the hepatocyte growth factor receptor signaling pathway through dephosphorylation of MET.

**Cellular Location** Endoplasmic reticulum membrane; Peripheral membrane protein;

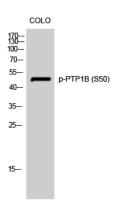

Cytoplasmic side Note=Interacts with EPHA3 at the cell membrane

**Tissue Location** Expressed in keratinocytes (at protein level).
