

cPLA2 (phospho Ser505) Polyclonal Antibody

Catalog # AP67800

Product Information

Application WB, IHC-P, IF **Primary Accession** P47712

Reactivity Human, Mouse, Rat

HostRabbitClonalityPolyclonalCalculated MW85239

Additional Information

Gene ID 5321

Other Names PLA2G4A; CPLA2; PLA2G4; Cytosolic phospholipase A2; cPLA2; Phospholipase

A2 group IVA

Dilution WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300.

Immunofluorescence: 1/200 - 1/1000. ELISA: 1/10000. Not yet tested in other

applications. IHC-P~~N/A IF~~1:50~200

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

Protein Information

Name PLA2G4A

Synonyms CPLA2, PLA2G4

Function Has primarily calcium-dependent phospholipase and lysophospholipase

activities, with a major role in membrane lipid remodeling and biosynthesis of

lipid mediators of the inflammatory response (PubMed: 10358058,

PubMed:14709560, PubMed:16617059, PubMed:17472963,

PubMed:<u>18451993</u>, PubMed:<u>27642067</u>, PubMed:<u>7794891</u>, PubMed:<u>8619991</u>, PubMed:<u>8702602</u>, PubMed:<u>9425121</u>). Plays an important role in embryo implantation and parturition through its ability to trigger prostanoid

production (By similarity). Preferentially hydrolyzes the ester bond of the fatty acyl group attached at sn-2 position of phospholipids (phospholipase A2 activity) (PubMed:10358058, PubMed:17472963, PubMed:18451993, PubMed:7794891, PubMed:8619991, PubMed:9425121). Selectively

hydrolyzes sn-2 arachidonoyl group from membrane phospholipids, providing the precursor for eicosanoid biosynthesis via the cyclooxygenase pathway

(PubMed: 10358058, PubMed: 17472963, PubMed: 18451993,

PubMed:7794891, PubMed:9425121). In an alternative pathway of eicosanoid biosynthesis, hydrolyzes sn-2 fatty acyl chain of eicosanoid lysophopholipids to release free bioactive eicosanoids (PubMed:27642067). Hydrolyzes the ester bond of the fatty acyl group attached at sn-1 position of phospholipids (phospholipase A1 activity) only if an ether linkage rather than an ester linkage is present at the sn-2 position. This hydrolysis is not stereospecific (PubMed:7794891). Has calcium-independent phospholipase A2 and lysophospholipase activities in the presence of phosphoinositides (PubMed:12672805). Has O-acyltransferase activity. Catalyzes the transfer of fatty acyl chains from phospholipids to a primary hydroxyl group of glycerol (sn-1 or sn-3), potentially contributing to monoacylglycerol synthesis (PubMed:7794891).

Cellular Location

Cytoplasm. Golgi apparatus membrane. Nucleus envelope Note=Translocates to intracellular membranes in a calcium-dependent way.

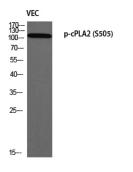

Tissue Location

Expressed in various cells and tissues such as macrophages, neutrophils, fibroblasts and lung endothelium. Expressed in platelets (at protein level) (PubMed:25102815)

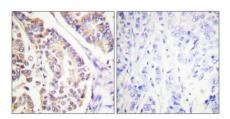

Background

Selectively hydrolyzes arachidonyl phospholipids in the sn-2 position releasing arachidonic acid. Together with its lysophospholipid activity, it is implicated in the initiation of the inflammatory response.

Images

Western blot analysis of VEC using p-cPLA2 (S505) antibody. Antibody was diluted at 1:1000

Immunohistochemical analysis of paraffin-embedded Human breast cancer. Antibody was diluted at 1:100(4°,overnight). High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negetive contrl (right) obtaned from antibody was pre-absorbed by immunogen peptide.
