Protein Information

Name	BMP5
Function	Growth factor of the TGF-beta superfamily that plays essential roles in many developmental processes, including cartilage and bone formation or neurogenesis (PubMed: 11580864 , PubMed: 29321139). Initiates the canonical BMP signaling cascade by associating with type I receptor BMPRI1A and type II receptor BMPRI2 (PubMed: 11580864). In turn, BMPRI1A propagates signal by phosphorylating SMAD1/5/8 that travel to the nucleus and act as activators and repressors of transcription of target genes (PubMed: 11580864 , PubMed: 29321139). Can also signal through non-canonical pathway such as MAPK p38 signaling cascade to promote chondrogenic differentiation (PubMed: 20402566). Promotes the expression of HAMP, this is repressed by its interaction with ERFE (PubMed: 30097509).
Cellular Location	Secreted.
Tissue Location	Expressed in the lung and liver.

Background
