

# **Bub3 Polyclonal Antibody**

Catalog # AP68731

### **Product Information**

**Application** WB, IHC-P, IF **Primary Accession** 043684

Reactivity Human, Mouse, Rat

HostRabbitClonalityPolyclonalCalculated MW37155

#### **Additional Information**

**Gene ID** 9184

Other Names BUB3; Mitotic checkpoint protein BUB3

Dilution WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300.

Immunofluorescence: 1/200 - 1/1000. ELISA: 1/5000. Not yet tested in other

applications. IHC-P~~N/A IF~~1:50~200

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

#### **Protein Information**

Name BUB3

**Function** Has a dual function in spindle-assembly checkpoint signaling and in

promoting the establishment of correct kinetochore-microtubule (K-MT) attachments. Promotes the formation of stable end-on bipolar attachments. Necessary for kinetochore localization of BUB1. Regulates chromosome segregation during oocyte meiosis. The BUB1/BUB3 complex plays a role in the inhibition of anaphase-promoting complex or cyclosome (APC/C) when spindle-assembly checkpoint is activated and inhibits the ubiquitin ligase activity of APC/C by phosphorylating its activator CDC20. This complex can

also phosphorylate MAD1L1.

**Cellular Location** Nucleus. Chromosome, centromere, kinetochore. Note=Starts to localize at

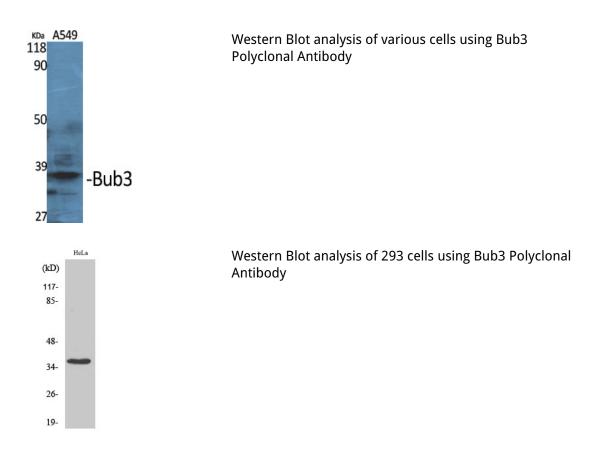

kinetochores in prometaphase I (Pro-MI) stage and maintains the localization

until the metaphase I- anaphase I (MI-AI) transition.

# **Background**

Has a dual function in spindle-assembly checkpoint signaling and in promoting the establishment of correct kinetochore-microtubule (K-MT) attachments. Promotes the formation of stable end-on bipolar attachments. Necessary for kinetochore localization of BUB1. Regulates chromosome segregation during oocyte meiosis. The BUB1/BUB3 complex plays a role in the inhibition of anaphase-promoting complex or cyclosome (APC/C) when spindle-assembly checkpoint is activated and inhibits the ubiquitin ligase activity of APC/C by phosphorylating its activator CDC20. This complex can also phosphorylate MAD1L1.
