

Coronin 1A Polyclonal Antibody

Catalog # AP69244

Product Information

Application WB, IHC-P **Primary Accession** P31146

Reactivity Human, Mouse, Rat

HostRabbitClonalityPolyclonalCalculated MW51026

Additional Information

Gene ID 11151

Other Names CORO1A; CORO1; Coronin-1A; Coronin-like protein A; Clipin-A; Coronin-like

protein p57; Tryptophan aspartate-containing coat protein; TACO

Dilution WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300.

ELISA: 1/40000. Not yet tested in other applications. IHC-P~~N/A

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

Protein Information

Name CORO1A

Synonyms CORO1

Function May be a crucial component of the cytoskeleton of highly motile cells,

functioning both in the invagination of large pieces of plasma membrane, as well as in forming protrusions of the plasma membrane involved in cell locomotion. In mycobacteria-infected cells, its retention on the phagosomal

membrane prevents fusion between phagosomes and lysosomes.

Cellular Location Cytoplasm, cytoskeleton. Cytoplasm, cell cortex. Cytoplasmic vesicle,

phagosome membrane. Note=In non-infected macrophages, associated with the cortical microtubule network. In mycobacteria-infected macrophages, becomes progressively relocalized and retained around the mycobacterial phagosomes. Retention on the phagosomal membrane is strictly dependent on mycobacterial viability and not due to impaired acidification (By similarity).

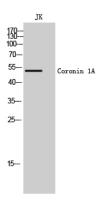

Tissue Location Expressed in brain, thymus, spleen, bone marrow and lymph node. Low in

lung and gut

Background

May be a crucial component of the cytoskeleton of highly motile cells, functioning both in the invagination of large pieces of plasma membrane, as well as in forming protrusions of the plasma membrane involved in cell locomotion. In mycobacteria- infected cells, its retention on the phagosomal membrane prevents fusion between phagosomes and lysosomes.
