Protein Information

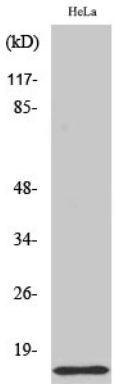

Name	COX17
Function	Copper metallochaperone involved in the assembly of cytochrome c oxidase (respiratory chain complex IV, CIV) (PubMed:15229189, PubMed:19393246, PubMed:31903891, PubMed:35750769). Binds two copper ions and delivers them to metallochaperones SCO1 and SCO2, which co-chaperone the copper ions to the Cu(A) site on the cytochrome c oxidase subunit II (MT-CO2/COX2), and to metallochaperone COX11 which relays the copper to the Cu(B) site on the cytochrome c oxidase subunit I (MT-CO1/COX1) (PubMed:15229189, PubMed:19393246, PubMed:35750769).
Cellular Location	Mitochondrion intermembrane space. Cytoplasm
Tissue Location	Ubiquitous..

Background

Copper metallochaperone essential for the assembly of the mitochondrial respiratory chain complex IV

(CIV), also known as cytochrome c oxidase. Binds two copper ions and delivers them to the metallochaperone SCO1 which transports the copper ions to the Cu(A) site on the cytochrome c oxidase subunit II (MT- CO2/COX2).
