Protein Information

Name	DNAJB11
Synonyms	EDJ, ERJ3, HDJ9
Function	As a co-chaperone for HSPA5 it is required for proper folding, trafficking or degradation of proteins (PubMed: <u>10827079</u> , PubMed: <u>15525676</u> , PubMed: <u>29706351</u>). Binds directly to both unfolded proteins that are substrates for ERAD and nascent unfolded peptide chains, but dissociates from the HSPA5-unfolded protein complex before folding is completed (PubMed: <u>15525676</u>). May help recruiting HSPA5 and other chaperones to the substrate. Stimulates HSPA5 ATPase activity (PubMed: <u>10827079</u>). It is necessary for maturation and correct trafficking of PKD1 (PubMed: <u>29706351</u>).
Cellular Location	Endoplasmic reticulum lumen Note=Associated with the ER membrane in a C-terminally epitope-tagged construct
Tissue Location	Widely expressed.
