## Protein Information

Name	SLC2A1 ( <a href="#">HGNC:11005</a> )
Function	Facilitative glucose transporter, which is responsible for constitutive or basal glucose uptake (PubMed: <a href="#">10227690</a> , PubMed: <a href="#">10954735</a> , PubMed: <a href="#">18245775</a> , PubMed: <a href="#">19449892</a> , PubMed: <a href="#">25982116</a> , PubMed: <a href="#">27078104</a> , PubMed: <a href="#">32860739</a> ). Has a very broad substrate specificity; can transport a wide range of aldoses including both pentoses and hexoses (PubMed: <a href="#">18245775</a> , PubMed: <a href="#">19449892</a> ). Most important energy carrier of the brain: present at the blood-brain barrier and assures the energy-independent, facilitative transport of glucose into the brain (PubMed: <a href="#">10227690</a> ). In association with BSG and NXNL1, promotes retinal cone survival by increasing glucose uptake into photoreceptors (By similarity). Required for mesendoderm differentiation (By similarity).
Cellular Location	Cell membrane; Multi-pass membrane protein. Melanosome. Photoreceptor inner segment {ECO:0000250 UniProtKB:P17809}. Note=Localizes primarily at the cell surface (PubMed:18245775, PubMed:19449892, PubMed:23219802,

PubMed:24847886, PubMed:25982116). Identified by mass spectrometry in melanosome fractions from stage I to stage IV (PubMed:17081065)

## Tissue Location

Detected in erythrocytes (at protein level). Expressed at variable levels in many human tissues

## Background

Facilitative glucose transporter. This isoform may be responsible for constitutive or basal glucose uptake. Has a very broad substrate specificity; can transport a wide range of aldoses including both pentoses and hexoses.
